(54) Title: FRUIT-VEGETABLE QUALITY EVALUATION DEVICE

(54) 発明の名称: 果菜類の品質評価装置

(57) Abstract: There is provided a quality evaluation device capable of evaluating the quality of fruits-vegetables with a high accuracy. The transmitting light from an object (M) to be measured is received by a light reception sensor of charge accumulation type. Charge is accumulated in the light reception sensor from the accumulation start timing until the time set for accumulation has elapsed. After this, an electric charge accumulation discharge processing for discharging the electric charge accumulated in the light reception sensor until the time set for discharge has elapsed is repeatedly performed. When the object (M) reaches the measurement position, the charge accumulated is discharged. After this, a measurement charge accumulation processing is performed for accumulating charge used as light reception information for quality evaluation. Furthermore, the quality evaluation device includes: a light reception section (2) for receiving near-infrared light projected from a projection section (1) to the object to be measured by performing spectral analysis; and a calculation section for calculating a quality value of the fruit-vegetable in accordance with the received light information from the light reception section (2) and a measurement equation. This calculation section is configured so as to perform wavelength calibration in accordance with the received light information obtained when a reference body for wavelength calibration is measured. The measurement equation is created with a smaller resolution than the maximum resolution of the received light information decided in accordance with the number of unit light reception sections. The wavelength calibration performed by using the received light information is performed with a smaller resolution than the resolution required for creating the measurement equation.

(57) 要約: 果菜類の品質評価値を求めるときの計測精度に優れた品質評価装置を得るために、被計測物 (M) からの透過光を電荷蓄積型の受光センサで受光すると共に、蓄電開始タイミングから蓄電用設定時間が経過するまで受光センサに電荷を蓄積させ、その後、放電用設定時間が経過するまで受光センサに蓄積された電荷を放出させる電荷蓄積放電処理を繰り返し実行し、且つ、被計測物 (M) が計測箇所に至ると、蓄積した電荷を放出させ、その後、

品質評価用の受光情報として用いる電荷を蓄積させる計測用電荷蓄積処理を実行するように構成してある。さらに、被計測物に対して投光部 (1) より投射した近赤外域の光を分光

INTERNATIONAL SEARCH REPORT

International application No.

PCT/JP03/16536

Box I Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:

because they relate to subject matter not required to be searched by this Authority, namely:

2. ☐ Claims Nos.:

because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:

3. ☐ Claims Nos.:

because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of item 3 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

The first group of inventions disclosed in claims 1-4 and the second group of invention disclosed in claims 5-13 are matched only in that they relate to a device for measuring the reflected light or transmitted light from a fruit-vegetable so as to evaluate its quality. The other technical features are different between the first group and the second group. Their objects are also different. The object of the former is to reduce the error caused by residual charge when using a charge accumulation type sensor and the time required for its operation while the object of the latter is to reduce the time required for creating a measurement equation.

(See extra sheet)

1. ☒ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest ☐ The additional search fees were accompanied by the applicant's protest.
☒ No protest accompanied the payment of additional search fees.
